THE

TELEGRAPHIC JOURNAL

AND

ELECTRICAL REVIEW.

VOL. III.

DECEMBER, 1874—DECEMBER, 1875,

LONDON:

HAUGHTON & COMPANY, 10, PATERNOSTER ROW, E.C.

Sc 1490.161

Farrar Fund.

March 21. 1875 –

Feb. 16. 1876.

JUN 20 1917
TRANSFERRED TO
HARVARD COLLEGE LIBRARY

INDEX.

ACTION of currents on magnets, 56; of magnets on rarefied gases in capillary tubes, rendered luminous by an induced current, 251
Actions produced by the simultaneous meeting of battery and of electro-capillary currents, 24, 165
Adams, W. Grylls, on the forms of equi-potential curves and surfaces and lines of electric force, 126
Adjustment of Morse instruments, 154
Aluminium when used as a positive electrode in a voltameter, electro-chemical, resistance offered by, 59
Aldershot, telegraphy at, 168
Anglo-American Telegraph Company, meeting, 96
Apparatus for showing internal resistance in battery cells, 33
Application of electro-magnetism to railway wheels, 280; of the electric current to the extinction of fire, 285
Arbitration, 157
Armatures, on the effect produced by the application of, to perfect magnets, 59; on the magnetisation of steels furnished with, 84
Artificial imitation of magneto-polar native platinum, experiments on, 95
Atmospheric electricity and ozone, 163
Automatic cylinder transmitter, 302
Ayrton, Prof. W. E., note regarding action of currents on magnets, 56

BAKERIAN lecture, 299
Battery, the history of, in its various forms, 88; voltaic, 14, 27, 38, 50, 61, 88, 111, 134, 171, 181
Batteries, secondary, of M. Planté, 272
Block signalling, railway, 217, 247, 289
Boat race, the, 78
Breguet, A. Niaudet, Gramme's magneto-electric machines, 184, 196, 223
Brief summary of telegraphs prior to the year 1838, 255
British Association, 209

CABLES, the life of, 169
Camacho's concentric iron tube electro-magnet, 59, 84
Cell, and its effects, the, 14
Central telegraph station, 110
Chautard, J., on the action of magnets on rarefied gases in capillary tubes, rendered luminous by an induced current, 251
China, electrical science in, 213
Circuits, derived, 48; open and closed, 128
Clamond's thermo-electric battery, 119
Clocks, watches, and bells, 35
Closed circuits, 23, 71
Competition, telegraphic, 61
Compliments of the season, 1
Conference, International Telegraphic, 205
Construction and maintenance of lightning conductors, 44, 63; telegraph, 139, 146, 159, 174, 195, 219, 236, 245, 293; a manual of (review), 47
Contact *v.* Chemism, 85
Cour, Paul la, a new system of electric telegraphy, 244
Crespin, M.A., pneumatic telegraphs for long distances, 191, 227
Curious case of magnetisation, 280
Cylinder transmitter, automatic, 302

DEATH by lightning, terrible, 180
Decay of timber, 189
Decomposition and preservation of woods, 47; electrical, 50, 61
Depth and superposition of magnetised layers in steel, 108
Derived circuits, 48
Determining the quantity of magnetism of a magnet, 108
Dial, the first idea of telegraphic, 204
Direct and indirect determination of the poles in magnets, 3; measurement galvanometer, new, 86
Discoveries, 97
Double-balance method of duplex telegraphy, explanation of, 216; sending and quadruplex telegraphy, 206, 218, 233, 258
Du Moncel, Count, lightning protectors, 99
Duplex telegraphy, explanation of double-balance method of, 216
Dyar, Harrison Gray, 87

EARTH batteries, electric, 68; boring for telegraph poles, 6, 117, 132
Edison's, T. A., notes on electric problem, 102
Editor's note book, gatherings from, 179
Effect produced by the application of armatures to perfect magnets, 59
Effects of lightning on the steeple of St. Martin's Church, Basle, 36
Egotism of ignorance, 266
Electric force, the forms of equi-potential curves and surfaces and lines of, 126; magnitudes and their measure in absolute units, 36; light, 59, 267; new light, 59; conductivity of various forms of carbon, an experiment for showing, 267; earth batteries, 68; lathe chuck, 167; pile of sesquioxide of iron, 308; telegraph, 171, 270, remark-

able anticipation of the, 256; telegraphy, a new system of, 244; vibrations, certain experimental investigations on 35
Electrical appliances, exhibition of, in Paris, 298; decomposition, 50, 61; discharges in vacuo, experiments to ascertain the cause of stratification in, 113; terms, 73; puzzles, 94, 107; science in China, 213; problem, 23; notes on Mr. Edison's problem, 102
Electricité, exposé des applications de l', 81
Electricity, and light, new relation between, 282, 305; its theory, sources, and applications (review), 83; atmospheric, and ozone, 163; mill lighting by, 249; lectures on, 53, 75, 95, 124, 137, 160
Electro-capillary actions, and the forces producing them, 108; forces in nutrition phenomena, new researches on the manner of intervention of, 108; currents, actions produced by the simultaneous meeting of battery and of, 23; medical galvanoscope, 108; magnetic clock at the London Post Office, 168
Electro-chemical resistance offered by aluminium, etc, 59; dynamic elementary law, 36; deposition of metals, 74
Electro-magnetism, application of, to railway wheels, 280
Electro-magnets, 56; Camacho's concentric iron tube, 84
Electro-motive force, to find the internal resistance of a battery and its, at the same time, 249
Electrotyping, 134
Engine, a new form of magneto-electric, 142
Equatorial needle, or a compass that swings E. and W. (review), 216
Equipotential curves and surfaces and lines of electric force, the forms of, 126
Errata, 158
Exhibition of electrical appliances at Paris, 298
Experiment, 25; for showing the electric conductivity of various forms of carbon, 267
Experimental investigations on electric vibrations, 35; physics, theoretical and practical, 59
Experiments to ascertain the cause of stratification in electrical discharges in vacuo, 113, 122; on the artificial imitation of magneto-polar native platinum, 95; on the rapidity of magnetisation and demagnetisation of iron and steel, 180
Explanation of the double-balance method of duplex telegraphy, 216
Exposé des applications de l'electricité (review), 81

FACTS and theory, 49
Faraday, Prof., 13; on Wheatstone's electric telegraph in relation to science, 270
Fifty years' progress, 18
Finance, telegraphic, 133
Fires, London, water supply, 208

GALVANISM, practical applications of, 181
Galvanometer, new direct measurement, 86
Galvanoscope, electro-medical, 108
Galvanoplastic, simple apparatus for students, 36
Gavey, John, earth boring for telegraph poles, 6; telegraph construction, 139, 146, 159, 174, 195, 219, 245, 293
Gatherings from editor's note-book, 179, 190, 201, 216, 228
Gladstone's, Dr. John Hall, lectures, 2, 14, 27, 38, 50, 61, 88, 111, 134, 171, 181
Gramme's Magneto-Electric Company, 36; machines, 184, 196, 223
Gray, Elisha, the telephone, 24; transmitting musical tones by electricity, 286

HELIOGRAPH of Mr. Mance, 73
Herwig's critique on the essay "On the Nature of Electricity," reply to, 36
Highton, the late Rev. Henry, obituary notice, 2
Holtzman s system of underground telegraph lines, 65
Horse-shoe magnets, upon the induced currents produced by the application of armatures to, 142
How it feels to be struck by lightning, 240

IGNORANCE, the egotism of, 266
Imperial College of Engineering, Japan, 25
Indiarubber, 155
Induced current, action of magnets on rarefied gases in capillary tubes rendered luminous by an, 251; currents produced by the application of armatures, and a new form of magneto-electric engine, 142
Insulators, line, 245
Internal resistance of a battery, to find the, and its electromotive force at the same time, 249
International telegraphic conference, 205; exhibition of electrical appliances to be held at Paris in 1877, 298
Introduction to experimental physics (review) 59
Improvement in Morse apparatus, 268
Improvements in private telegraphy, 252; upon magneto-electric machines, 12
Inviolability of telegraph messages, 298
Inquiry, 95
Iron ore, application of magnetic needle in searching for, 236

JAPAN, the Imperial College of Engineering, Tokei, 25
Jenvey, H. W., adjustment of morse instruments, 154
Jones, F. W., quadruplex telegraphy, 148
Journal of Society of Telegraph Engineers (review), 190

KEMPE, H. R., resistances and their measurement, 115, 152, 158, 222; on a system of quadruplex telegraphy, 162

LATHE chuck, electric, 167
Lectures at the Royal Institution, by Dr. Gladstone, 2, 14, 27, 38, 50, 61, 88, 111, 134, 171, 181; by Prof. Tyndall, 53, 75, 97, 124, 137, 160
Light, electric, 59, 267; new, 60
Lighthouses and telegraphs, 121
Lighting by electricity, mill, 249
Lightning, 109; conductors, construction and maintenance of, 44, 63; effects of, on the steeple of St. Martin's Church, Basle, 36; protection of life and property from, 191; protectors, 99; protectors for telegraph lines, 59; remarks on the construction of protectors, 265; rod man, 156; terrible death by, 180; how it feels to be struck by, 240
Life of cables, 169
Line insulators, 245
London fires—water supply, 208
Lost opportunities, 22
Lymington Literary Institution, 96

MAGNETIC, electro clock at the Post Office, 168; function of a ball of soft iron, 36; needle in searching for iron ore, application of, 236; railway rails, 119

Magnetism and the situation of the poles in slender needles, the quantities of, 119; general and terrestrial, treatise on (review), 22; of a magnet, determining the quantities of, 108; notes on, 47, 84, 95; new source of, 132
Magneto-electric machines, improvements on, 12; Gramme's 184, 196, 223; engine, a new form of, 142
Magneto-polar native platinum, experiments on the artificial imitation of, 95
Magnetisation, curious case of, 280; and demagnetisation of iron and steel, experiments on the rapidity of, 180; the theory of the process of, 132; remarkable case of, 119; of steels furnished with armatures, 84
Magnetised layers in steel, depth and superposition of, 108
Magnetism of steel, 284
Magnetising function of tempered steel, 108
Magnets, action of currents on, note, 56; the neutral line of, 104
Mance's, Mr., heliograph, 73
Manual of telegraph construction (review), 47
Measurement of resistances by fall of charge, 152
Measurements of terrestrial magnetism, 36
Metallic posts, sockets for, 24
Metals, electro deposition of, 74
Meteorological society, 130
Method of signalling on railways, a new, 106
Military Telegraphs, 307
Mill lighting by electricity, 249
Morse instruments, the adjustment of, 154; apparatus, improvement in, 268
Musical tones, transmitting by electricity, 286

NETHERLANDS, statistics of important telegraphs in, 166
Neutral line of magnets, 104
New relation betwen electricity and light, 282, 305; source of magnetism, 132; use of platinum, 132; Zealand telegraphy, 241

OBITUARY, Rev. Henry Highton, 2; Sir Charles Wheatstone, 241, 253
Open and closed circuits, 128

PETRUSCHEVSKY, Th., on direct and indirect determination of the poles in magnets, 3
Physical society, 33
Planté, M., secondary batteries of, 272
Platinum, new use of, 132
Pneumatic telegraphs, a way to discover where carriers are stopped in the tubes, 12; for long distances, 191, 202, 227; telegraphy, 269
Pole of wrought iron, telegraph, 165
Poles in magnets, direct and indirect determination of, 3
Post-office telegraphs, 48, 58, 84, 96, 109
Preece, W. H, on a system of telegraphy, 193, 211, 230, 242, 290
Preservation and decomposition of woods, 48
Private telegraphy, improvements in, 252
Problem, electrical, 23
Progress, fifty years, 18
Prophecy, scientific, 37
Protection of life and property from lightning during thunderstorms (review), 191
Protectors for telegraph lines, lightning, 60
Puzzles, electrical, 94, 107

QUADRUPLEX telegraph, 148; telegraphy, 206, 208, 218, 233, 236, 258; on a system of telegraphy, 162
Quantities of magnetism and the situation of the poles in slender needles, 119

RAILWAY accident, Thorpe, 26; companies *v.* government telegraphs, 168; block signalling, 217, 247; rails, magnetic, 120; wheels, application of electro-magnetism to, 280
Railways, a new method of signalling on, 106
Remarkable anticipation of the electric telegraph, 256; case of magnetisation, 119
Remarks on the construction of lightning protectors for telegraph wires, 265
Repetition of passage into the helix, 119
Replacement of metals, 27, 38
Reply to Herwig's critique, 36
Researches on the manner of intervention of electro-capillary forces in nutrition phenomena, 108
Resistance of a battery, to find the, and its electro-motive force at the same time, 249
Resistances and their measurement, 115, 152, 158, 222
Royal Institution lectures, 2, 14, 27, 38, 40, 50, 53, 61, 75, 88, 97, 111, 124, 134, 137, 160, 171, 181; telegraphing, 42

SCIENTIFIC prophecy, 37
Scudamore, Frank Ives, C.B., 160
Schaack, F., remarks on the construction of lightning protectors, 265
Searching for iron ore, 236
Secondary batteries of M. Planté, 272
Sesquioxide of iron, electric pile of, 308
Siemens' automatic cylinder transmitter, 302
Signalling on railways, a new method, 106; railway block, 217, 247, 289
Society of telegraph engineers, 20, 32, 46, 57, 68, 80, 130, 143, 264, 279, 296
Sockets for metallic posts, 24
Special telegraphy, 86
Sprague, J. T., electro-deposition of metals, 74; new direct measurement galvanometer, 86
Statistics of important telegrams in the Netherlands, 166
Stratification in electrical discharges in vacuo, experiments to ascertain cause of, 113, 122
Stratified light, 48
Steel, magnetism of, as influenced by its carbon and its hardness 284
Summary of telegraphs prior to the year 1838, 255
Sussex fortnight, the, 182
System of telegraphy, 193, 211, 230, 242, 290; a new, 244

TALE of a rat, 66
Tariff, word, 288
Telegraph Engineers, Society of, 20, 32, 46, 57, 68, 80, 130, 143, 264, 279, 296; Journal of, 190; finance, 133; electrical society, 34, 104; review, 191; competition, 61; construction, a manual of (review), 47; construction, 139, 146, 159, 174, 195, 219, 236, 245, 293; messages, inviolability of, 298; paper, 144; remarkable anticipation of the electric, 256; pole of wrought iron, 165; poles, earth boring for, 6, 117, 132; in New York, 204; quadruplex, 148
Telegraphs, Post-office, 48, 58, 84, 96, 109; prior to the year 1838, brief summary, 255; lighthouses and, 121; military, 307
Telegraphic communication with Paris Bourse, 11; finance,

133; finance, 133; dial, first idea of, 204; problems of double sending and quadruplex telegraphy, 206, 218, 233; progression in 1874-5, in America, 268
Telegraphing, royal, 42
Telegraphy in 1874, 1; quadruplex, 206, 208; weather, 229; New Zealand, 241; special, 86; at Aldershot, 168; a system of, 162, 193, 21', 230, 242, 290; a new system of, 244; quadruplex, 206, 208, 236, 258; pneumatic, 269
Telephone, 24
Temperature, the influence of, on magnetisation, 84
Tempered steel, magnetising function of, 108
Terrible death by lightning, 180
Theory of the process of magnetisation, 132
Timber, decay of, 189
Thermo-electric battery of Clamond, 119
Thorpe railway accident, 26
Tolhausen, A., mill lighting by electricity, 249; the application of the electric current to the extinction of fire, 285
Transactions of the Telegraph Electrical Society (review), 191
Transmission of two messages in same direction at same time on one wire, 186
Transmitting musical tones by electricity, 286
Treatise on magnetism, general and terrestrial (review), 22
Tyndall, Prof., lectures on electricity, 53, 75, 97, 124, 137, 160

UNDERGROUND telegraph lines, Holtzman's system, 65; wires, 145

VOLTAIC battery, 14, 27, 38, 50, 61, 88, 111, 134, 171, 181

WATER supply, London fires, 208
Weather telegraphy, 229
Winter, G. K., on the telegraphic problems of double sending and quadruplex telegraphy, 206, 218, 233, 258
Wheatstone, the late Sir C., obituary notice, 241, 253; Bakerian lectures, 299
Wheatstone's electric telegraph in relation to science, on, 270
Word tariff, 288

YEAR book of facts in science and arts for 1874 (review), 144

END OF VOLUME III.

JUDD AND CO., PHŒNIX PRINTING WORKS, DOCTORS' COMMONS LONDON, E.C.

Vol. III. No. XLVI.] JANUARY 1, 1875. [Price Fourpence.

THE TELEGRAPHIC JOURNAL

AND

ELECTRICAL REVIEW.

LONDON: HENRY GILLMAN, BOY COURT, LUDGATE HILL, E.C.

New York: D. Van Nostrand, 23, Murray Street and 27, Warren Street. Paris: Madame Veuve J. Boyveau, Librarie Etrangère, 22, Rue de la Banque. Berlin: A. Asher & Co., 53, Mohrenstrasse.

MR. STREETER,

18, NEW BOND STREET, LONDON, W.,

Diamond Merchant,

JEWELLER, SILVERSMITH, AND WATCHMAKER.

Manufacturer of the

ENGLISH LEVER KEYLESS WATCH.

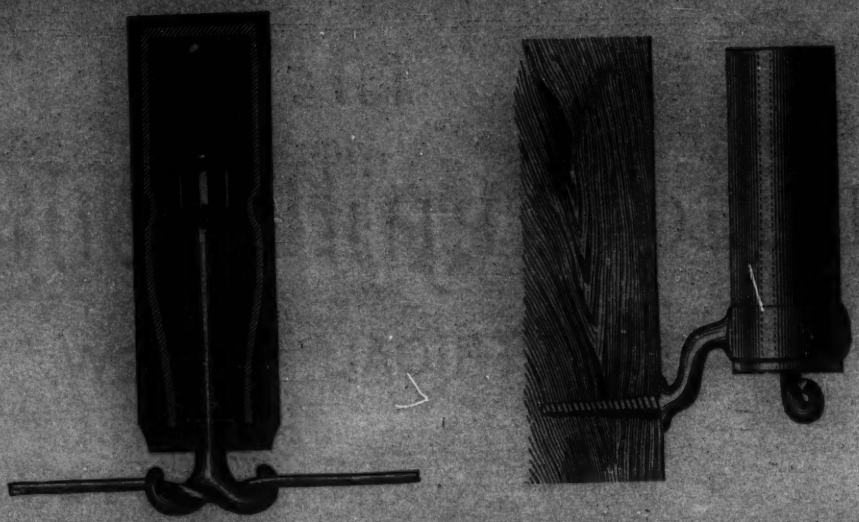
Improved by complete interchangeability of parts.

High-class time keeping and durability combined with economy.

For Prices, see Illustrated Catalogue Post Free for Two Stamps.

MANUFACTORY: BURLINGTON STEAM WORKS, SAVILE ROW W.

THE BROOKS PATENT INSULATOR.



The advantages of this improvement in the insulation of overland lines are:—1st. It is not affected by rain or humid atmosphere. 2nd. As a result of this quality (perfect insulation) large and expensive wire conductors are avoided. For circuits less than 300 miles in length, a wire of No. 11 or 12 B.W.G. is sufficient. For circuits varying from 300 to 500 miles, a No. 10 answers; and from 500 to 1000 miles, a No. 9—or 4 millimetres diameter—wire answers all the purposes of the larger and more expensive conductors. 3rd. Lines insulated with this Insulator are not affected inductively,—a desirable quality where the double transmission system is employed. 4th. These Insulators protect the posts from the effects of atmospheric discharges. 5th. They are not injured by missiles. 6th. They afford a simple and secure fastening for the wire conductors. The foregoing qualities *guaranteed*.

Manufactured and for Sale by the Proprietor,

DAVID BROOKS, 22, South 21st Street, Philadelphia, U.S.A.

ALSO BY

SIEMENS BROS., 12, Queen Anne's Gate, London, S.W.

Gramme's Magneto-Electric Machines.

ELECTRIC POWER COMPANY, LIMITED,

14, CORNHILL, LONDON, E.C.

TO TELEGRAPH ENGINEERS AND INSTRUMENT MANUFACTURERS.

WALTER HALL,

TELEGRAPH CONTRACTOR AND MANUFACTURER.

EVERY DESCRIPTION OF TELEGRAPHIC APPARATUS.

Silk and Cotton-Covered Copper Wires suitable for every kind of Electrical Instruments.
German Silver Wires for Resistance Coils.
Coils for Electric Bells. Needle and other Instruments Wound and Tested to order.
India-Rubber, Gutta-Percha, and other kinds of Insulated Wire, requisite in fitting-up Electric Bells for domestic and other purposes.
Telegraph Cables for Submarine, Subterranean Aërial Telegraphs, Mines and Gunnery Experiments; also for Naval and Engineering purposes.

Ebonite, Tissue Gutta-Percha, Paraffin. India-Rubber and Shell-Lac Varnishes, &c., supplied.

WORKS—MANSFIELD STREET, SOUTHWARK, S.E.

CITY OFFICES AND WAREHOUSES—21, ALDERMANBURY, E.C.
